STEAP 2 gene is located on chromosome 7q21 and is CC used in gene therapy. Inhibiting the development or progression of a CC cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) CC expressing STEAP or inhibiting growth or killing cells expressing STEAP or inhibiting growth or killing cells expressing STEAP or inhibiting growth or killing cells expressing STEAP or inhibiting a patient with a cancer that expresses STEAP, or CC inhibiting growth or killing cells expresses STEAP, or CC inhibiting growth or killing cells expressing STEAP, comprises cadministering to the patient a vector encoding STEAP, comprises cadministering to the patient a vector encoding single chain monoclonal contibody that comprises the variable domains of the heavy and light contibody that comprises the variable domains of the heavy and light contibody that comprises the single chain monoclonal antibody coding comprises the variable domains of the heavy and light contibody that expressed intracellularly. Note: This sequence is stated to be the same as that being shown as SEQ ID NO:8 (AAE02841) in sequence contibody is expressed intracellularly. Note: This sequence is stated to be the same as that being shown as SEQ ID NO:8 (AAE02841) in sequence

AXX IIvv The invention relates to substantially pure prostate-specific or testiscolor specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for cexpressing the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that commodulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate (C particularly prostate cancer, benign prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the cancer, breast cancer, pancreatic cancer, breast cancer, pancreatic cancer, breast cancer, pancreatic cancer, pancreatic cancer, standard and cancer. The present sequence is prostate specific protein, Six-Transmembrane or protein of Prostate 1, STMP1, ORF2

The pyrostate cancer-associated polymucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer, associated genes are useful for diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications. ABG61800-ABG61944 represent prostate cancer-associated proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TAT138
```

```
The invention relates to an isolated tumour-associated antigenic target CC polypueptide (TAT) (I), specifically TAT138 polypeptides, and the CC polypucleotides (II) encoding them. (II) is useful for diagnosing the CC presence of a tumour in a mammal, where the level of expression of (II) is indicative on the presence of tumour in the mammal from which the test CC sample was obtained. Antibody to (I) is useful for killing a cancer cell. (e.g. breast cancer cell, a contral nervous system (CNS) cancer cell, a no varian cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral cancer cell, a pancreatic cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous system (CNS) cancer cell, a contral nervous cancer cell, a contral cancer cell, a contral cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a contral nervous cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a cancer cell, a

The antibodies are also useful for treating a TAT-expressing cancer or alleviating one or more symptoms of cancer in a mammal. The present sequence represents the amino acid sequence of TAT138

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC a DNA sequence 80% identical to the polynucleotide encoding the protein (or CC hybridises to complement of the polynucleotide), a vector comprising the CC hybridises to complement of the polynucleotide), a vector comprising the CC proparation of pro23203, a chimeric molecule comprising the vector, CC preparation of pro23203, a chimeric molecule comprising the vector, CC preparation of pro23203, a chimeric molecule comprising pro23203 fused to a heterologous amino acid sequence, an anti-Pro23203 antibody, an CC agonist/antagonist of pro23203, and diagnosting the presence of prostate cancer in a mammal by: (a) contacting a microarray diagnostic with a CC DNA185171-2994 probe, detecting and quantifying hybridisation of CC DNA185171-2994 probe in prostate cancer tissue compared with normal tissue and determining if DNA185171-2994 is overexpressed; or (b) CC contacting a tissue of the mammal with an anti-Pro23203 antibody and detecting the binding of the mammal with an anti-Pro23203 antibody and CC detecting the binding of the mammal with an anti-Pro23203 antibody and CC detecting the binding of the presence of prostate cancer in the mammal. The antibody to a component of the tissue, where coportion of the body, where the antibody is not conjugated with a cypotoxic agent and the method further comprises administering a CC chemotherapeutic agent to the mammal and for diagnosing the presence of prostate cancer in an mammal. The pro23203 plynucleotide is useful for capents or for use in gene therapy and for chromosome identification. CC pro23203 and polynucleotide may also be used for tissue typing and CC (agonists) or prevent the effect of the Pro23203 polypeptide (antagonists) pro23203 is further useful for the affinity purification componing to the pro23203 is further useful for the affinity purification componing to the pro23203 polypeptide componing to the pro23203 polypeptide componing to the pro23203 polypeptide componing to the pro23203 polypeptide componing to the pro23203 polypeptide componing to the pro23

The invention discloses human nucleic acids encoding tumour-associated antigenic target (TAT) polypeptides, with our without their associated signal peptide. Also disclosed is an antibody that specifically binds to the TAT polypeptides, a method for detecting the presence of a tumour in a mammal and a method for killing a cancer cell expressing the TAT polypeptide. The nucleotide sequences are useful in preparing TAT polypeptides by recombinant techniques and in gene therapy (e.g. for replacement of defective gene). The TAT polypeptides are useful as therapy ending the presence, prevention and/or treatment of a tumour, such as colon, breast or prostate tumour. The TAT polypeptides and nucleic acids may also be used diagnostically for tissue
                                                                                                                                                                                                                                              Goddard .

Sequence 454 AA;

```
The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel cor its partial peptide, an antibody binding to the polypuptide or peptide of the polynucleotide, immunologically assaying the polypuptide or peptide of the polynucleotide by contacting the polypuptide or peptide cor with the antibody of the encoded protein, and observing the binding contacting the polynucleotide between the two, a transformant carrying the polynucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The oligonucleotide cor sections are useful as pharmaceutical agents and many disease-related cor genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell concoding them can be used as indicators for developing a diagnostic marker or transcription-related proteins, disease-related proteins and genes are involved in tissue and/or cell the activity or expression of the encoded proteins and genes are the activity or expression of the encoded protein and genes are the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the securion particle is based on sequence information supplied by the conception patent office.

                                                                                                                                                                                                                                                                                                                            The invention relates to six-transmembrane epithelial antigen of the prostate related protein (STEAPRP) and its corresponding nucleic acid. STEAPRP DNA is used to diagnose and to treat prostate cell proliferative disorders, particularly prostate hyperplasia and prostate cancer, and for screening a library of molecules of compounds for specific binding affinity. It is also used in gene therapy. STEAPRP is used to screen a subject sample for antibodies, which specifically binds the protein, and to prepare and purify a protein. The present sequence is human STEAPRP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; STEAPRP; proliferative disorder; six-transmembrane epithelial antigen of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
The invention relates to a purified human protein comprising a copypeptide having a fully defined transmembrane protein differentially compressed in prostate and lung tumour (TMPL) sequence. The protein is cueful for detecting expression of the protein in a sample, where the compressed in prostate tissue sample and the protein is diagnostic differentially expressed when compared with a standard and is diagnostic of a lung or prostate cancer. The protein is useful to identify an compared with a standard and is diagnostic of a lung or prostate cancer. The protein is useful to identify an compared with a standard and is diagnostic of a lung or prostate cancer. The protein is useful for greening several molecules and compounds to identify at least one compared with a standard and protein is also useful for preparing and purifying a compound to identify at least one compared with a standard animal immunisation/hybridoma methods. A TMPL specific antibody using compounds to detect expression of the protein in a lung or prostate cancer. A TMPL specific antibody is useful as a diagnostic for lung or constate cancer. A TMPL specific antibody is useful for protein a protein, for treating a prostate cancer and for compountifying a protein, for treating a prostate cancer and for the protein is useful for diagnosing, staging, treating or monitoring compounds to the protein of the human of the protein of the protein of the human and the protein of cancer, preferably lung or prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to substantially pure prostate-specific or testis-
CC specific polypeptides and the nucleic acids encoding them. Also included
CC are vectors and host cells expressing the proteins, a transgenic animal
CC expressing the protein, antibodies against the proteins, probes for
CC and methods of isolating modulators of the proteins. Compounds that
CC and methods of isolating modulators of the proteins. Compounds that
CC to diagnose, prevent or treat disorders of the testis or prostate
CC postatitis, testicular cancer, benign prostatic polypeptide are useful
CC prostatitis, testicular cancer, cryptorchidism, undescended, retractile,
CC ascending or vanished testis. Other proliferative disorders for which the
CC modulators may be used include lymphoma, leukaemia, melanoma, ovarian
CC cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer.
CC Transmembrane Protein of Prostate 1, STM;1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches 443;

                                                                                                                                                                                                                                          The invention relates to substantially pure prostate-specific or testiscocific polypeptides and the nucleic acids encoding them. Also included conversing the protein, antibodies against the proteins, a transgenic animal expressing the proteins, a transgenic animal expressing the proteins. Compounds for conductive acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that commodulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate corrections, compounds that convert proteins that the protein or treat disorders of the testis or prostate compounds that convert proteins or prostate convertibles, acute constituing prostate cancer, benign prostation hyperplasia, acute constituing or vanished testis. Other proliferative disorders for which the condulators may be used include lymphoma, leukaemia, melanoma, ovarian concer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence is prostate specific protein, Six-Transmembrane protein of Prostate 1, STM;1, ORF3

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain (C reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed (C genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is cueful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders (involving aberrant protein expression or biological activity. The collapse of the protein expression or biological activity. The collapse of the protein expression or biological activity. The collapse of the protein expression or biological activity of mutations in the polypeptide and polynuclectide sequences have applications in the collapse of the protein expression of the protein expression or biological activity.

cc sequences. (I) is useful as hybridisation probes, polymerase chain (cc reaction (PCR) primers, oligomers, and for chromosome and gene mapping, cand in recombinant production of (II). The polynucleotides are also used cc and in recombinant production of (II). The polynucleotides are also used cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is complypely to the second of the production of quantitating a polypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and is binding partners are useful in medical imaging cf sites expressing (III). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The cc polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodivarsity and to produce other types of data and products dependent on DNA and cand sequences. Abdoull-Abg30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this calculation format directly from WIPO at cf ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drmanac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 20;

                                                     The present sequence is an alternative version of human six transmembrane cepithelial antigen of the prostate (STEAP)-2 protein. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is cocated on chromosome 7q21 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting growth or vaccine composition to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or inhibiting growth or inhibiting growth or inhibiting growth or inhibiting growth or inhibiting growth or inhibiting growth or inhibiting growth or inhibiting growth or stilling cells expressing STEAP, or inhibiting growth or stilling cells expressing STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain compositional antibody that specifically binds to STEAP, comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, comprises the vector delivers the single chain monoclonal antibody is expressed intracellularly. Note: This sequence is stated to be the same as that being shown as SEO ID NO:8 (AAEO2781) in figure 9A-9C of the specification. However the present sequence lacks several amino acids at its C-terminal end when compared with the sequence shown in figure 9A-9C terminal end when compared with the sequence shown in figure 9A-9C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; cytostatic; antiproliferative; vaccine; gene therapy; six transmembrane epithelial antigen of the prostate-2; STEAP-2; chromosome 7q21; cancer; prostate; colon; bladder; lung; ovarian;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human STEAP-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II). (II) and (III) are useful for diagnostic evaluation of disorders. (I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis), immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
